

NO TOOLS REQUIRED MODERN CHRISTMAS TREE!

Tools you will need to create this :

DAP RapidFuse Wood Adhesive

Clamps

Drill or hammer and nail if you want to add hooks

(6) 3/8" x 2" x 3' craft boards - \$1.85 ea.

(3) 3/8" x 2" x 2' craft boards - \$1.32 ea.

7/8" brass cup hooks optional

INSTRUCTIONS

1. First lay out your boards for the first triangle. Each triangle is made up of (2) 3' boards and (1) 2' board. The bottom 2' board should lay on top of both of the 3' boards. The 3' boards will overlap at the top. Clamp the corners together without glue to get your triangle set up at the right angles.

2. Once your triangle is set up, unclamp one clamp and apply RapidFuse Wood Adhesive between the boards. Re-clamp. Work your way around the triangle until all three angles are glued together.

3. Once all three triangles are dry, lay out all three triangles together to determine spacing between the three. Start with the bottom triangle, laying the middle triangle on top of that, and the top triangle on top of the middle one. Clamp together at all points of overlap and glue together.

4. If you want to hang your tree on the wall, use a self-leveling claw tooth picture hanger on the back. If you want to hang ornaments on your tree, you can use a drill to create small holes in your tree, or a hammer and nail to just start small holes, and screw 7/8" brass cup hooks into the tree.
